

INTRODUCTION TO WORD PROCESSING

LESSON-6

CLASS-6

INTRODUCTION TO WORD PROCESSING

- **Historical Context**

Before computers were commonly used, people used typewriters to create letters, reports, and other documents.

- **What is Word Processing?**

Word processing means using a computer program to type, edit, format, save, and print documents.

- **Examples of Word Processing Software**

Some common word processing software are:

- MS Word
- OpenOffice Writer
- WordPad
- WordPerfect

MICROSOFT WORD (Ms-word)

- Microsoft Word (MS Word) is popular word processing software developed by Microsoft.
- It is used to create:
 - Letters
 - Reports
 - Resumes
 - Applications
 - Flyers
 - Other documents

- Some versions of MS Word are:
 - MS Word 2002
 - MS Word 2003
 - MS Word 2007
 - MS Word 2010

MS-Word 2010

- MS-Word 2010 is a version of Microsoft Word used to create and edit documents.
- It was released in June 2010.
- It can be used to create:
 - Letters
 - School papers
 - Flyers
 - Faxes
 - Reports

➤ **Main Features of MS-Word 2010:**

1. Quick Access Toolbar

It provides quick access to commonly used commands such as Save, Undo, and Redo.

2. Document Recovery

It helps recover a document if the program closes unexpectedly before the document is saved.

3. SmartArt Graphics

It helps present information using attractive diagrams and graphics.

4. Artistic Effects

It allows us to apply artistic effects to pictures.

5. Picture Adjustment

It allows us to adjust the color and brightness of pictures.

6. Screenshot Tool

It allows us to capture a screenshot and insert it into a document.

STARTING MS-WORD 2010

There are different ways to start MS-Word 2010.

➤ Method 1: Using Start Menu

Start → Microsoft Office 2010 → Microsoft Word 2010

➤ Method 2: Using Run Command

- Press Windows Key + R.
- Type WinWord in the Run box.
- Click OK.
- MS-Word 2010 will open.

COMPONENTS OF MS-WORD 2010 WINDOW

The main parts of the MS-Word window are:

➤ Quick Access Toolbar

- It is located at the top of the window.
- It contains frequently used commands such as:
 - Save
 - Undo
 - Redo

➤ Title Bar

- It is located at the top of the window.
- It displays the name of the current document.
- Before saving a new document, its name is usually Document1.

➤ Ribbon

- The Ribbon contains different tabs and commands used to work with a document.
- For example:
 - Home
 - Insert
 - Page Layout
 - References
 - Review
 - View

➤ Ruler

- The ruler is found at the top and left side of the document.
- It helps to set:
 - Margins
 - Indents
 - Tab positions

➤ Text Area

- It is the large white area where we type and edit text.
- The blinking line in the text area is called the cursor.

➤ Scroll Bars

- Scroll bars help us move through the document.
- There are:
 - **Vertical Scroll Bar – moves up and down.**
 - **Horizontal Scroll Bar – moves left and right.**

➤ Status Bar

- The Status Bar is located at the bottom of the window.
- It shows information such as:
 - Page number
 - Number of words
 - Other document information

➤ Zoom Control and View Buttons

- Zoom Control is used to increase or decrease the size of the document on the screen.
- View Buttons are used to change the way a document is displayed.

Document Operations

➤ Creating a New Document

To create a new document:

- Click File.
- Click New.
- Select Blank Document.
- Click Create

A new blank document will appear.

➤ Saving a Document:

Saving a Document for the First Time

- Click File.
- Click Save As.
- Select the folder where you want to save the document.
- Type the document name in the File name box.
- Click Save.

Saving Changes!

After making changes to a document:

- Click File → Save

Or press:

- Ctrl + S

➤ Save and Save As:

- **Save**
 - Save is used to save changes to the existing document.
- **Save As**
 - Save As is used to save the document as a new file, with a different name, location, or file format.

➤ Differences

Save	Save As
Saves changes to the existing file.	Creates a new copy of the file.
Usually keeps the same name.	Can use a different name.
Does not normally change the file location	Can save in a different location.

➤ Opening an Existing Document

- To open a document that is already saved:
 - Click File.
 - Click Open.
 - Find the folder where the file is saved.
 - Select the required file.
 - Click Open.

Shortcut Key Ctrl + O

Document Views in MS-Word 2010

MS-Word provides different ways to view a document.

- **Print Layout View**
 - Shows the document as it will appear when it is printed.
- **Web Layout View**
 - Shows how the document may look when displayed on a web browser.
- **Full Screen Reading View**
 - Provides more space on the screen for reading a document.
- **Outline View**
 - Shows the main structure and headings of a document.
- **Draft View**
 - Provides a simple view that is useful for quick editing of text.

- **Editing Text**

What is Editing?

Editing means making changes to the text in a document.

- Editing can include:
 - ✓ Adding text
 - ✓ Deleting text
 - ✓ Changing text
 - ✓ Correcting mistakes

Selecting Text

Before changing text, we often need to select it.

Selecting a Word

- Double-click on the word.
- Selecting a Sentence
- Hold the Ctrl key and click anywhere inside the sentence.
- Selecting a Line
- Click once in the left margin beside the line.
- Selecting a Paragraph
 - Triple-click anywhere inside the paragraph

Selecting the Entire Document

✓ Press:

Ctrl + A

Selecting a Block of Text

- Drag the mouse over the required text.

OR

- Click at the beginning of the text.
- Hold the Shift key.
- Click at the end of the text.

The text between the two points will be selected.

Selecting Non-Adjacent Text

Concept: Selecting items, lines, or paragraphs that are not next to each other in a document.

Key Technique: Select the first piece of text, then hold down the Ctrl key while making additional selections.

Shortcut / Action: Click anywhere in the document to deselect text.

Deleting Text

Backspace Key: Deletes text to the left of the insertion point cursor.

Delete Key: Deletes text to the right of the insertion point cursor.

Copying vs. Moving Text

Copying Text: Creates a duplicate copy of selected text without removing the original.

Shortcut: Ctrl + C (or click Copy in the Clipboard group on the Home tab).

Moving Text: Relocates text from its original position to a new location (Cut and Paste).

Shortcut: Ctrl + X for Cut, then Ctrl + V for Paste.

Clipboard Function: Cut or copied text is temporarily stored in the Clipboard until pasted.

Undoing and Redoing Changes

Undo: Reverses the last action or command performed.

Shortcut: Ctrl + Z (or click the Undo icon on the Quick Access Toolbar).

Redo: Restores an action that was previously reversed using the Undo command.

Shortcut: Ctrl + Y (or click the Redo icon on the Quick Access Toolbar).

Formatting Documents

Document Formatting: Adjusting visual attributes to make the document readable and presentable (e.g., font size, font style, alignment).

Mini-Toolbar: A semi-transparent pop-up toolbar that appears when text is selected, offering quick access to common character formatting options.
